Odaiclet Marina Piccinini

odaiclet@gmail.com | +1 (415) 713-2496 | www.odaicletpiccinini.com

Education

UC Berkeley BA in Cognitive Science with Minor in Data Science   **GPA:** 3.38   **Expected June 2022**
Honors Societies: Alpha Gamma Sigma & Phi Theta Kappa
Relevant Coursework: Discrete Math, Statistics, Linear Algebra, Calculus, Differential Equations, Matlab, C++, Python, Research Methods, Computational Models of Cognition, Statistical Methods for Data Science

Skills

Programming Languages: Python, R, Matlab, C++, SQL
Tools: Jupyter Notebook, RStudio, Google Colab, Matlab, Xcode, Snowflake, Air9, H2O
Spoken Languages: English (near native), Spanish (native)
Citizenships: United States (citizen), Venezuela (citizen)

Work Experience

Data Scientist Summer Intern| Discover Financial Services   **June 2021 – Aug 2021**
- Developed an unsupervised machine learning algorithm leading to the prediction of 3700+ anomalous records out of 1.8 million
- Created an innovative and simple system to enhance a rule that detects fraudulent merchants
- Collaborated with fraud investigators to share and validate results of 300+ potentially fraudulent merchants
- Used Snowflake, H2O.ai, and RStudio while effectively communicating results through presentations and reports

Research Assistant | National Science Foundation & Northern Arizona University   **June 2020 – Aug 2020**
- Received grant from the National Science Foundation to conduct astrophysics research
- Analyzed sky survey data from ATLAS and ZTF telescopes, leading to the detection of 7000+ asteroids
- Communicated results through data visualization, presentations, and reports

Lead Tutor | College of Marin   **Jan 2017 – May 2020**
- Designed transition guides that helped train 50+ staff members on remote meeting software (Zoom) amidst COVID-19 pandemic
- Provided 50+ hours of individualized tutoring to students in Mathematics including calculus, linear algebra, and statistics, as well as English, Spanish, and ESL courses

Projects

Modeling the Shape of Asteroid 2015 KZ120 | **Analysis**
- Developed a mathematical model using data query that derives rotational periods, light curves, and colors of 40+ asteroids used sky survey data from ATLAS and ZTF telescopes
- Derived a previously-unknown rotational period and shape of an asteroid using light curve inversion techniques
- Used python (Numpy and Pandas), collab notebooks and published algorithms for this work

Index Fund Investment Portfolio Calculator | **Analysis**
- Created a shiny app that calculates the total stock market of an index fund to track the future performance of the initial investment
- Used R, diverse shiny gadgets, and future value calculations assuming a normal distribution to illustrate the flow of an investment assuming annual or monthly contributions

Hurricane Pattern Validation | **Analysis**
- Applied exploratory data analysis and data visualization in R to understand hurricane patterns
- Results illustrated a greater frequency of hurricanes than initially proposed

Leadership

President | Alpha Gamma Sigma Honor Society of College of Marin (AGS)   **Fall 2019 – Spring 2020**
- Led weekly board meetings, fundraising events, and volunteering activities for 70+ members
- Worked with Treasurer to create budget and fundraised $6000+ for the club

President/Co-Founder | Women in Tech Club of College of Marin (WIT)   **Fall 2018 – Spring 2020**
- Founded in response to lack of diversity and inclusion within university's computer science community
- Led weekly board meetings (1 hour) with 7 board members and 1 advisor via Slack
- Facilitated information about local internships opportunities, guest talks, and hackathon's for all members

Introduction to Physics, College of Marin | Guest Speaker   **October 2020**
- Facilitated an introduction to astrophysics lecture and shared research findings to a class of 20+ students
